## Silica Gel

### Article type:

poison information

### Access:

public

**Silica Gel:** Used to prevent moisture damage and avoid spoilage of goods. Often included in packing materials for pharmaceutical products, camera equipment or shoes. Also known as desiccants.

**What is it:** Silicone dioxide in the form of granules or powder (resembling sugar).

**Is it toxic?** Silica gel is non-toxic. Although these packets often say 'DO NOT EAT' on them, the concern is it that it can be a choking hazard.

### Health Effects:

**Eyes:** Possible irritation if particles left in eye.

**Ingestion:** Poisoning is not expected from ingestion of beads or powder. Swallowing the

packaging could be a choking hazard.

### What to do:

**Eyes:** Rinse eyes with lukewarm water with one of the following methods:

- Pour a gentle stream of water from a jug or clean teapot over the eye from the inside corner by the nose, across the eye, flowing out towards the ear.
- Submerge eye in a container (bowl, sink) of lukewarm water. Have patient open and close eye.
- Eye may be irrigated in the shower if this can be accomplished without delay.
- Young children may be wrapped like a mummy in a towel with arms at side and held over sink or tub or laid on counter during flushing.

**Ingestion:** Rinse out mouth and drink a small glass of water or milk. Contact the Poison Control Centre if the entire package has been swallowed.

**Do not induce vomiting. If symptoms persist after above first aid measures, contact the Poison Control Centre.**

**How can I prevent exposure?** Dispose of silica gel packages when no longer needed.

**Need more information:** Call the Poison Control Centre.
